

# RISC-V Formal ISA Specification Public Review: Survey

For this public review, please first read the README and the descriptions of the current status of the various models at [https://github.com/riscv/ISA\\_Formal\\_Spec\\_Public\\_Review](https://github.com/riscv/ISA_Formal_Spec_Public_Review), and the comparison table at [https://github.com/riscv/ISA\\_Formal\\_Spec\\_Public\\_Review/blob/master/comparison\\_table.md](https://github.com/riscv/ISA_Formal_Spec_Public_Review/blob/master/comparison_table.md), then fill in the form below with your opinions and rationale for them. After submission, you will be able to see the other responses so far, and to edit your response.

This survey is organised by the RISC-V Formal ISA Specification Task Group and the University of Cambridge (contacts: Nikhil, Task Group Chair <[nikhil@bluespec.com](mailto:nikhil@bluespec.com)> and Peter Sewell <[Peter.Sewell@cl.cam.ac.uk](mailto:Peter.Sewell@cl.cam.ac.uk)>). The intention is to publish all responses to this survey, attributed to the names and contact details provided. In submitting a response you consent to this occurring; if you do not wish this to happen please do not complete the survey. For more details on how we will handle your personal information, please see <https://www.information-compliance.admin.cam.ac.uk/data-protection/general-data>.

Comments on any of the above

The Candidate Formal Models

For each of the candidate formal models, please give your overall view for whether it would be good, adequate, or inadequate for the needs of the RISC-V ecosystem, explaining why.

Forvis (Bluespec)

	Good	Adequate	Inadequate
Overall, is the Forvis spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

## Forvis - comments

the answer is the same for all of the formal models: it is too early to make a decision. each of the models is extremely good: it's just that they're (all of them) incomplete (still under development in some way). in addition, i think you'll find that even *\*making\** a choice will result in that team becoming a critical dependency *\*for the entire RISC-V ecosystem\**. if they're an academic team, that's unfortunate: once the project no longer receives funding or the research project ends, then so does RISC-V "conformance". and if they're a Corporation, the Corporation may manipulate the RISC-V ecosystem for profit-maximising purposes, and if it goes bust, the project ends, and so does RISC-V "conformance". so not only is it a bad idea to pick one *\*right now\**, it's a bad idea to pick only *\*ONE\** of these formal verification suites *\*at all\**. instead it would be far, far better for the RISC-V Formal Verification Group to develop a *\*STANDARD\** for Formal Verification, to which *\*\*ALL\*\** of these may comply. that's what a Standards Organisation does: develop *\*STANDARDS\**, *\*NOT\** select some random codebase off the internet and say "here! this is now a standard!". so you need to define the *\*expected results\**, in sufficient detail and with sufficient clarity such that *\*ALL\** of the FIVE formal models may conform and comply with it, in a machine-executable fashion. if that's too challenging, then at least some human-verifiable expectations may be defined.

---

## GRIFT (Galois)

	Good	Adequate	Inadequate
Overall, is the GRIFT spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

## GRIFT - comments

the answer is the same for all of the formal models: it is too early to make a decision. each of the models is extremely good: it's just that they're (all of them) incomplete (still under development in some way). in addition, i think you'll find that even *\*making\** a choice will result in that team becoming a critical dependency *\*for the entire RISC-V ecosystem\**. if they're an academic team, that's unfortunate: once the project no longer receives funding or the research project ends, then so does RISC-V "conformance". and if they're a Corporation, the Corporation may manipulate the RISC-V ecosystem for profit-maximising purposes, and if it goes bust, the project ends, and so does RISC-V "conformance". so not only is it a bad idea to pick one *\*right now\**, it's a bad idea to pick only *\*ONE\** of these formal verification suites *\*at all\**. instead it would be far, far better for the RISC-V Formal Verification Group to develop a *\*STANDARD\** for Formal Verification, to which *\*\*ALL\*\** of these may comply. that's what a Standards Organisation does: develop *\*STANDARDS\**, *\*NOT\** select some random codebase off the internet and say "here! this is now a standard!". so you need to define the *\*expected results\**, in sufficient detail and with sufficient clarity such that *\*ALL\** of the FIVE formal models may conform and comply with it, in a machine-executable fashion. if that's too challenging, then at least some human-verifiable expectations may be defined.

Comments on any of the above

The intent behind the content of the prose specification versus the formal specification should be explicit. This will help guide the content so that the two appear as complementary instead of redundant.

The Candidate Formal Models

For each of the candidate formal models, please give your overall view for whether it would be good, adequate, or inadequate for the needs of the RISC-V ecosystem, explaining why.

## The Candidate Formal Models

For each of the candidate formal models, please give your overall view for whether it would be good, adequate, or inadequate for the needs of the RISC-V ecosystem, explaining why.

### Forvis (Bluespec)

Good

Adequate

Inadequate

Overall, is the Forvis  
spec:

### Forvis - comments

Supports neither instruction encodings and asm syntax nor concurrency

---

### GRIFT (Galois)

Good

Adequate

Inadequate

Overall, is the GRIFT  
spec:

## GRIFT - comments

Seems to support the least features among the tools you propose

## Sail (SRI/Cambridge)

	Good	Adequate	Inadequate
Overall, is the Sail spec:	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

## Sail - comments

The tool covers encodings and concurrency, generation for theorem provers, and is the fastest one in simulation. Futhermore it has a BSD licence

## RISC-V-PLV (MIT)

	Good	Adequate	Inadequate
Overall, is the RISC-V-PLV spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

## RISC-V-PLV - comments

Does not cover most of the things I feel interesting (encoding) or very hard to have right (concurrency).

## Kami (SiFive)

	Good	Adequate	Inadequate
Overall, is the Kami spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

## Kami - comments

Covers half my needs !

---

## Any additional comments

Note that I am not an expert in formal stuff, and that my analysis comes from your comparison chart, not from my own experience.

Comments on any of the above

The Candidate Formal Models

For each of the candidate formal models, please give your overall view for whether it would be good, adequate, or inadequate for the needs of the RISC-V ecosystem, explaining why.

Forvis (Bluespec)

	Good	Adequate	Inadequate
Overall, is the Forvis spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

Forvis - comments

too slow

GRIFT (Galois)

	Good	Adequate	Inadequate
Overall, is the GRIFT spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

## GRIFT - comments

too slow

---

## Sail (SRI/Cambridge)

	Good	Adequate	Inadequate
Overall, is the Sail spec:	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

## Sail - comments

Faster, specification language is better

---

## RISC-V-PLV (MIT)

	Good	Adequate	Inadequate
Overall, is the RISC-V-PLV spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

## RISC-V-PLV - comments

too slow

---

## Kami (SiFive)

	Good	Adequate	Inadequate
Overall, is the Kami spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

## Kami - comments

unknown speed, no privilege level support?

---

## Any additional comments

Still need SAIL to support F-extension, otherwise it's the best

# RISC-V Formal ISA Specification Public Review: Survey

For this public review, please first read the README and the descriptions of the current status of the various models at [https://github.com/riscv/ISA\\_Formal\\_Spec\\_Public\\_Review](https://github.com/riscv/ISA_Formal_Spec_Public_Review), and the comparison table at [https://github.com/riscv/ISA\\_Formal\\_Spec\\_Public\\_Review/blob/master/comparison\\_table.md](https://github.com/riscv/ISA_Formal_Spec_Public_Review/blob/master/comparison_table.md), then fill in the form below with your opinions and rationale for them. After submission, you will be able to see the other responses so far, and to edit your response.

This survey is organised by the RISC-V Formal ISA Specification Task Group and the University of Cambridge (contacts: Nikhil, Task Group Chair <[nikhil@bluespec.com](mailto:nikhil@bluespec.com)> and Peter Sewell <[Peter.Sewell@cl.cam.ac.uk](mailto:Peter.Sewell@cl.cam.ac.uk)>). The intention is to publish all responses to this survey, attributed to the names and contact details provided. In submitting a response you consent to this occurring; if you do not wish this to happen please do not complete the survey. For more details on how we will handle your personal information, please see <https://www.information-compliance.admin.cam.ac.uk/data-protection/general-data>.

The Candidate Formal Models

For each of the candidate formal models, please give your overall view for whether it would be good, adequate, or inadequate for the needs of the RISC-V ecosystem, explaining why.

Forvis (Bluespec)

Good

Adequate

Inadequate

Overall, is the Forvis  
spec:

Forvis - comments

Haskell is a strongly desired by me and Forvis has is a permissive license. It seems quite well executed. I can definitely see this one would be useful to me and it should serve well as a formal model.

.....

## GRIFT (Galois)

	Good	Adequate	Inadequate
Overall, is the GRIFT spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

### GRIFT - comments

GPL, totally unusable for partial inclusion in commercial products. While it is a formal specification, I can definitely see that there are chance for an executable specification to be at least partially included in actual products, test or development and there is a wide grey zone. People may say that a license will say what is allowed or not, but many commercial users will be very careful with this, and there are alternatives without this problem. I will for sure stay at a safe distance from this one.

---

## Sail (SRI/Cambridge)

	Good	Adequate	Inadequate
Overall, is the Sail spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

### Sail - comments

I put it on Adequate, I have somewhat limited use of it as I am focused on Haskell and will have most use for such specification, but I am not to dismiss it.

---

## RISC-V-PLV (MIT)

	Good	Adequate	Inadequate
Overall, is the RISC-V-PLV spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

## RISC-V-PLV - comments

Haskell, permissive license, but it is an academic project and to me such projects are often orphaned as soon as the academic interest shifts, as it often does. Lots of good stuff come out of academia, but it is often not entirely complete or long-term.

## Kami (SiFive)

	Good	Adequate	Inadequate
Overall, is the Kami spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

## Kami - comments

Another non-Haskell specification, see comments about Sail.

## Comments on any of the above

Obviously, each of these may be crucial to somebody: I've answered what is important to me.

## The Candidate Formal Models

For each of the candidate formal models, please give your overall view for whether it would be good, adequate, or inadequate for the needs of the RISC-V ecosystem, explaining why.

### Forvis (Bluespec)

Good

Adequate

Inadequate

Overall, is the Forvis  
spec:

### Forvis - comments

Uses Haskell to good effect without (hopefully) scaring off readers more used to conventional ISA descriptions. But I'm not sure how easy it will be to extract definitions suitable for use in a theorem prover.

## GRIFT (Galois)

	Good	Adequate	Inadequate
Overall, is the GRIFT spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

### GRIFT - comments

Only accessible to Haskell experts.

---

## Sail (SRI/Cambridge)

	Good	Adequate	Inadequate
Overall, is the Sail spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

### Sail - comments

Probably the best choice at full scale; language and definition style seem a little heavy-weight for the minimal subsets of the ISA. Current extraction to Coq does not produce very idiomatic definitions, but this can no doubt be improved over time.

---

## RISC-V-PLV (MIT)

	Good	Adequate	Inadequate
Overall, is the RISC-V-PLV spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

### RISC-V-PLV - comments

Similar to Forvis, but requires somewhat more Haskell expertise to read (OK for me, but probably not ideal for broader community).

---

## Kami (SiFive)

	Good	Adequate	Inadequate
Overall, is the Kami spec:	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

### Kami - comments

Organization focused on synthesis is not so natural for other purposes. Coq is not very accessible to broader community.

### Any additional comments

# RISC-V Formal ISA Specification Public Review: Survey

For this public review, please first read the README and the descriptions of the current status of the various models at [https://github.com/riscv/ISA\\_Formal\\_Spec\\_Public\\_Review](https://github.com/riscv/ISA_Formal_Spec_Public_Review), and the comparison table at [https://github.com/riscv/ISA\\_Formal\\_Spec\\_Public\\_Review/blob/master/comparison\\_table.md](https://github.com/riscv/ISA_Formal_Spec_Public_Review/blob/master/comparison_table.md), then fill in the form below with your opinions and rationale for them. After submission, you will be able to see the other responses so far, and to edit your response.

This survey is organised by the RISC-V Formal ISA Specification Task Group and the University of Cambridge (contacts: Nikhil, Task Group Chair <[nikhil@bluespec.com](mailto:nikhil@bluespec.com)> and Peter Sewell <[Peter.Sewell@cl.cam.ac.uk](mailto:Peter.Sewell@cl.cam.ac.uk)>). The intention is to publish all responses to this survey, attributed to the names and contact details provided. In submitting a response you consent to this occurring; if you do not wish this to happen please do not complete the survey. For more details on how we will handle your personal information, please see <https://www.information-compliance.admin.cam.ac.uk/data-protection/general-data>.

.....

How important is each aspect of a formal ISA specification for RISC-V?

	Very important	Important	Not very important	No opinion
Functional coverage of ISA	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Assembly syntax and encoding specification	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Multicore concurrency (RVWMO+ZTSO)	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Single-core concurrency (instruction cache behaviour, interrupts, etc.)	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Floating point	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Use as an emulator	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use as a test oracle in tandem verification	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Generation of theorem-prover definitions for proof	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use for lightweight formal verification (bounded model-checking etc.)	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use in documentation, and readability	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use in test generation	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use for hardware synthesis	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Licencing, tool ecosystem, dependencies	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Ease of	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

Ease of  
extensibility

Plans for long-term  
development and  
maintenance

☐☒☐☐

Comments on any of the above

.....

The Candidate Formal Models

For each of the candidate formal models, please give your overall view for whether it would be good, adequate, or inadequate for the needs of the RISC-V ecosystem, explaining why.

Forvis (Bluespec)

GoodAdequateInadequate

Overall, is the Forvis  
spec:

☐☒☐

Forvis - comments

Concurrency and synthesis support would be useful

GRIFT (Galois)

GoodAdequateInadequate

Overall, is the GRIFT  
spec:

☐☒☐

## GRIFT - comments

A more permissive license might encourage more collaboration

---

## Sail (SRI/Cambridge)

	Good	Adequate	Inadequate
Overall, is the Sail spec:	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

## Sail - comments

Ticks all the boxes. Floating point might be nice, and also some integration with HardCaml.

---

## RISC-V-PLV (MIT)

	Good	Adequate	Inadequate
Overall, is the RISC-V-PLV spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

## RISC-V-PLV - comments

Concurrency support would be nice

---

## Kami (SiFive)

	Good	Adequate	Inadequate
Overall, is the Kami spec:	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

## Kami - comments

Coverage of privilege levels would be nice

---

## Any additional comments
